Tree Planting and Maintenance Plan Template for Newly Planted Trees USDA Forest Service Great Lake Restoration Initiative Grants

Organizations that plant trees through a U.S. Department of Agriculture, Forest Service Great Lakes Restoration Initiative grant agree to maintain newly planted trees and other vegetation for a reasonable life span, with particular emphasis on the initial 3-year establishment period. Maintenance work may be done by the applicant or partners. This document is a template for summarizing the planting plan and developing a maintenance plan. Use planting and maintenance standards generally accepted by the industry; they can be found in resources such as the <u>Guidance for Preparing Proposals for Landscape Tree Planting</u> and references cited in that guidance.

Planting Location Name (City, Town, Watershed, etc.):	of Planting: o be Planted: ock (e.g., B & B, container, bareroot): er; include details in table on last page): vities below will be completed. If an activity is not applicable, briefly explain.
Grantee:	
	ong
Widintenance Contact.	
Email:	
Year(s)/Season(s) of Planting:	
Type(s) of Plant Stock (e.g., B & B, container, bareroot):	
Size (average caliper; include details in table on last page):	
Describe how activities below will be completed. If an activity is not applicable, briefly explain.	
1. Tree Planting and Maintenance Personnel	
a. Identify the parties responsible for tree planting and maintenance during the grant period as well as I term maintenance beyond the life of the grant. Describe the roles of each party.	ong

b.	Describe the experience level of tree planting and maintenance personnel. If volunteers, homeowners, or inexperienced staff will be utilized, they should receive basic training and literature on proper maintenance techniques. Is training needed, and how will you provide it?			
C.	When trees are planted on private property, the property owner should sign an agreement to confirm they will maintain and protect the trees and provide access to the organization responsible for planting and maintenance. If applicable, what steps have you taken to ensure maintenance of private property?			
d.	How will you periodically confirm tree maintenance work is performed correctly?			

2.	Tree Watering Process
	Describe in detail how trees will be watered, the time period and frequency of watering, and the source of the water at the planting locations (or how it will be delivered). For the first year, trees should be watered from planting date through September on a weekly basis. Watering may be reduced the 2nd and 3rd years, depending on rainfall and site conditions.
3.	Mulching Trees
	Describe how mulch and/or other ground treatments will be used to reduce competing vegetation and improve tree health. Identify quality control measures that will maintain proper mulch depth (2-4" for landscape trees) and keep mulch 1-2" away from the base of the tree trunk.
4.	Staking and Guying Trees
	If staking is deemed necessary due to mowing, vandalism, or wind conditions, describe the staking and guying method and materials to be used. Also describe plans (timing and responsible party) for inspection and removal.

5.	Checking Tree Health
	The grantee will check trees regularly (at minimum every 6-12 months) to identify and address tree health concerns. Indicate who will be inspecting the trees, frequency, the tree inspection process, and what follow-up will occur.
6.	Tree Protection
	Young trees may be easily damaged by human activity, animals, equipment, or competition from weeds and invasive plants. Describe how planted trees will be protected.
7	Pruning
,.	Newly planted trees should need little pruning if they were properly cared for at the nursery. In the first year after planting, remove only dead or broken branches. In later years, weakly attached limbs can be removed, and structural pruning can be done if needed. Describe how any needed pruning will be done.
	removed, and structural pruning can be done if fleeded. Describe flow any fleeded pruning will be done.

	Trees planted under contract should include a warranty for replacement (due to poor condition or mortality), unless otherwise stated in the grant narrative. Describe your expected warranty conditions.
9.	Tree Replacement The grantee should be prepared to fully replace all trees that are in poor condition or die prior to the encof the project grant agreement, unless loss is due to natural disaster beyond the control of the project
	manager or is allowed for in the grant narrative. If the plan allows for some tree mortality within the establishment period, the grant narrative should include a target survival rate, tree replacement would occur below that rate. Describe tree replacement plans.

8. Tree Warranty

10. Planting Summary

Provide a summary of planned tree plantings for the proposed project in the table below. Add lines as needed to capture groupings of trees with similar attributes (e.g. species, size). This summary is not a substitute for a detailed planting plan developed by a qualified professional. The planting summary may be adjusted during project development, but diversity in the summary should be roughly representative of the final planting. Note that projects must avoid installing any state-listed invasive species, including invasives listed as "restricted", "pending further review", "non-restricted", on a watch list, etc.

Lacation	Species	Size (caliper, in	Number
Location	Species	inches, preferred)	Planted
