

This amendment:

1. Clarifies examples of supporting infrastructure for Advanced Nuclear Reactor development and deployment by including fuel fabrication facilities and spent nuclear recycling facilities. This change expands the specific definitions to be used in Topic Area 1 – Pre-application Review Activities and Topic Area 2 – Application Review Activities (Pages 13-15, 25).
2. Removes “supporting facility” as a term in the examples given in Topic Area 1 – Pre-Application Review Activities and Topic Area 2 – Application Review Activities (Page 15).
3. The open date has been changed from January 2030 to 2029 to clarify that it will end after the 2029 review cycle (Page 22).
4. Removes language allowing for submission of applications at any point during the review cycle. A application period is described below it (Page 23).
5. Clarifies that the year of the due date sets eligibility within the respective annual review cycle, e.g. the 2025 review cycle is due April 8, 2025, the 2026 review cycle April 8, 2026 (Page 23).
6. Clarifies that applications must be received between January 1 and the annual due date. Applications after the annual due date will need to be resubmitted for review in the next cycle, save for the final year in 2029 (Page 23).
